

# 数学 (二次方程式②・応用編)

$$\textcircled{6} x^2 + 4x = 14$$

$$\textcircled{1} x^2 = 9 \quad \textcircled{2} (x+4)^2 = 5 \quad \textcircled{3} (x-2)^2 = 25$$

$$\textcircled{7} x^2 - 6x = 3$$

$$\textcircled{4} 3(x+1)^2 = 6 \quad \textcircled{5} 4(x+6)^2 - 36 = 0$$

$$\textcircled{8} x^2 + 2x - 15 = 0$$
